# OVERVIEW

## Why Sirte's Road Rebuilding Needs Digital Control

Libya is entering a crucial reconstruction phase, and road development is central to restoring mobility and economic stability.

Construction companies in Sirte face challenges such as shifting timelines, material shortages, equipment downtime, subcontractor coordination, and strict budget control.

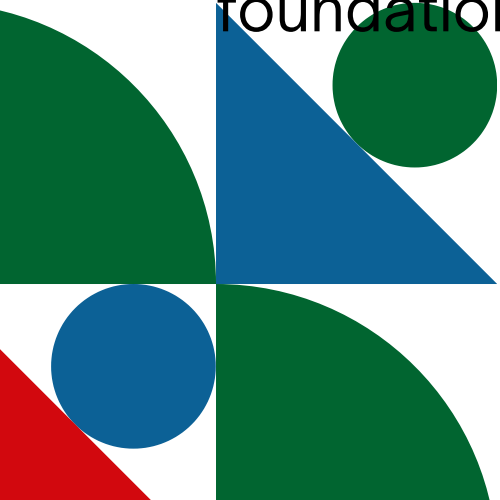

To operate efficiently, firms need:

- Structured planning for surveying, excavation, sub-base, paving, and inspections
- Real-time tracking of asphalt, aggregates, machinery, and transport vehicles
- Better visibility across suppliers, contractors, and engineering teams
- Strong budget control and milestone-based financial oversight
- Quality, safety, and compliance tracking for government-funded work
- Dashboards for progress, delays, resource usage, and overall performance

A unified ERP system becomes essential — and Odoo provides that foundation.
